

### **Wash Your Car Completely Waterless Using AquaNil-X Waterless Car Wash**

A normal 32 oz bottle of AquaNil-X can clean your car waterless an average of 7 times. This obviously depends on how heavily you apply and is based on normal application. Normal application is considered 2 two to three light sprays per area or section of your car.

Actual applications may vary depending on how soiled your vehicle is and how heavily you apply the product. Washing your car waterless 7 times using only one 32oz bottle of AquaNil-x can save approximately 980 gallons of water per bottle alone!

#### **For the best results follow these guidelines:**

Microfiber towels are recommended to gently and safely apply AquaNil-X and remove it. This way, chances of causing micro-scratches on the top coat, or interior surfaces are avoided.

Fold each Microfiber towels in half twice before use - This effectively gives you 8 clean pads to carry out your cleaning operation.

Spray the first microfiber towel with AquaNil-X to pre-wet, and then lightly spray the surface of the vehicle to be cleaned. Clean only one section of the car at a time.

Wipe over the section of the vehicles surface with the micro fiber towel pre-sprayed with AquaNil-X. Any motion circular or linear will work just fine to apply AquaNil-X.

Once you've applied the AquaNil-X and gently covered the section of the vehicle simply grab a clean microfiber towel and gently buff off leaving a brilliant long lasting luster.

**To summarize the easy process**

- Simply spray it on
- Wipe it in
- Wipe it off!

**Doesn't get any easier than that!**

AQUANIL-X - Eliminates the need to use multiple products - Eliminates the need for gallons of water running to waste - Eliminates possible toxic pollutants entering storm drains and many other benefits to our environment..

No listed Hazardous Ingredients - No Petroleum Solvents
